                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (1-488) x
                                                                                                                                                                      /note=forgan: Stemach; Vector: pTZ18RP1; Site 1: EcoRI;
/note=forgan: Stemach; Vector: BAR) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector: The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The cDNA libraries constructed by this method are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cheong, J.E.,

/clone ib="WIA Mouse 15K cDNA Clone Set"
/note="Vector: psport1; Site_1: Sall, Site_2: Not1; This
clone is among a rearrayed set of 15,447 clones from 11
embryo cDNA libraries (including preimplantation stage
embryos from unfertilized egg to blastocyst, embryonic
part of E7.5 embryos, extraembryonic part of E7.5
embryos, and E12.5 femále mesonephros/gonad) and one
newborn ovary cDNA library. Average insert size 1.5 kb.
All source libraries are cloned unidirectionally with
Oligo(dT)-Not primers. References include: (1)

                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a composition (I) comprising: carriers CC and immunostimulants; and a polypeptide (II) of a ovarian tumour CC polypeptide encoded by a polynuclectide (III) having a cDNA sequence (S1) CC from the 10912 nuclectide sequences as given in ABL77023 to ABL87934, CC (III) encoding (II) having a sequence (S2), a T cell population of (II), CC or antigen presenting cells that express (II). (I) has cytostatic CC activity. An oligonucleotide (IV) that hybridises to (S1) can be used for CC detecting ovarian cancer in a patient's biological sample preferably CC serum or ovarian tissue. The method comprises contacting a biological Sample from a patient with (IV), detecting the amount of polynucleotide (CC value and thereby detecting ovarian cancer in the patient, where the CC value and thereby detecting ovarian cancer in the patient, where the CC amount of polynucleotide hybridising to (IV) is detected preferably by CC polymerase chain reaction (PCR). (I) comprising (III) and/or (II) is CC useful for stimulating and/or expanding T cells specific for an ovarian CC useful in design and preparation of religious with (III) or (II). (III) is CC useful in design and preparation of ribozyme molecules for inhibiting CC consolate a full length gene from a suitable library e.g., a tumour cDNA consolate a full known techniques

production traits which comprises determining the diacylglycerol acyltransferase (DGAT1) genotypic state of the bovine, wherein the DGAT1 gene and polymorphisms have been found to be associated with such improved milk production traits. The method is useful for selecting a bovine having a desired DGAT1 genotypic state. It is also useful for the identification and selection of a bovine having one of the polymorphisms in its DGAT1 gene. Milk produced from selected bovine which is useful for making a dairy product provides a beneficial health effect. An antibody to the protein having DGAT1 activity is useful for inhibiting the activity of bovine DGAT1 in a lactating bovine so as to modulate milk production and/or milk solids content. DGAT1 nucleic acid and its fragments are useful in the farming industry. They are also useful to generate transgenic animals which are useful to investigate the molecular
                                                                                                                                                                                                                                                                                                       Georges
Ford CA,
                                                                                                                                                                                                                        Determining genetic merit of a bovine with respect to milk composition and volume for improved milk production, comprises determining the diacylglycerol acyltransferase gene genotypic state of the bovine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      31-OCT-2000;

(I) has cytostatic CC activity. An oligonuclectide (IV) that hybridises to (S1) can be used for CC detecting ovarian cancer in a patient s biological sample preferably CC serum or ovarian tissue. The method comprises contacting a biological CC sample from a patient with (IV), detecting the amount of polynuclectide hybridising to (IV) and comparing the amount to a predetermined cutoff CC value and thereby detecting ovarian cahcer in the patient, where the CC amount of polynuclectide hybridising the IV) is detected preferably by CC polymerase chain reaction (PCR). (I) comprising (II) and/or (II) is CC useful for stimulating and/or expanding T cells specific for an ovarian CC tumour protein comprising contacting T cells specific for an ovarian CC useful in design and preparation of ribozyme molecules for inhibiting CC expression of the tumour polypeptides and proteins in tumour cells; and CC to isolate a full length gene from a stitable library e.g., a tumour cDNA CC library using well known techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Composition for therapy and diagnosis of ovarian cancer comprising polypeptide of a ovarian tumor polypeptide, polynucleotide encoding polypeptide, antibody specific to polypeptide or T cell expressing polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 371
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; SEQ ID NO 5894; 489pp; English

                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the isolation of novel human enzyme CC polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences CC encoding them. The enzyme polypeptides of the invention may comprise the CC functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the CC disorders including hyperproliferative disorders (e.g. cancer), CC disorders including hyperproliferative disorders (e.g. cancer), CC arthritis), neurological disorders (e.g. AlDS) autoimmune disorders (e.g. atthritis), neurological disorders (e.g. AlDS) autoimmune disorders (e.g. atthritis), neurological disorders (e.g. AlDS) autoimmune disorders (e.g. atthritis), neurological disorders (e.g. Alzheimer's disease), metabolic CC disorders (e.g. phenylketonuria), inflammatory disorders (e.g. atthra), CC cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. hasmatory disorders (e.g. infertility) and CC invention can also be used in gene therapy. AAS40785-AAS41684 represent CC convention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly continued at the polynopublished pot_sequences.
                                                                                                                                                                                                                                                                                                                                        Pred.
